

OT Vulnerability Insights & Cyber Risk Services

Enabling proactive prevention with real-world OT context, and helping organizations effectively reduce risk to protect their assets

Why Verve

For 25+ years, Verve has helped industrial clients ensure the reliability of their ICS/OT environments. Security risks are increasing daily as attackers leverage newly found zero-day and other vulnerabilities. Our VIP Security Services support clients through their security maturity journey. We are their partner in delivering truly secure environments – from assessment to remediation, risk analysis, experts-on-demand, and managed services.

RISK REQUIRES CONTEXT

Information is only valuable when timely, utilized by the right hands, and when appropriate defensive actions can be taken upon it.

Verve helps you leverage what you have for increased value in current cyber security investments and improve OT cyber risk reduction.

Challenge:

Among asset inventorying or patching challenges in operational environments, one of the most critical issues for organizations is to understand vulnerability disclosures (also known as CVEs) in a way that is concise and comprehensive such that they can effectively anticipate threats, understand the vulnerability & it's applicability, prioritize prevention efforts, steps to eliminate or mitigate risk.

Solution:

Using our vast experience of securing industrial devices, process control, and systems integrations, we believe that Verve has a unique outlook on understanding what is important to our clients & continuing their operations safely, reliably, and securely.

To do so we examine the latest vulnerability information from a variety of sources (including our own) and distill it down into a nuanced report fit for consumption.

Benefits:

- Comprehensive briefings on a vulnerabilities' essentials on what, how, and why an organization should take note
- Detailed analyst perspective without the overhead or to act as a cyber security multiplier when resources are scarce
- Actionable findings that can be used to protect your organization, augment cyber security programs, reduce OT cyber risk using the Verve Security Platform, and corresponding best-in-class integrations
- Frequent updates tailored to OT environments focusing on relevant vulnerabilities targeting ICS, SCADA, IoT/IIoT & critical infrastructure
